Tips and Tricks

Notebook Math Tools

SMART notebook Math Tools provides math teachers with an add-on to SMART Notebook that combines all the tools needed to teach math concepts, solve equations, graph, measure, and more. This month's Tips and Tricks section.

Advanced Equation Capabilities

Change your handwritten equations to type, solve equations, graph equations, and use the advanced equation editor to teach Algebra!

$$y = 2x + 2$$

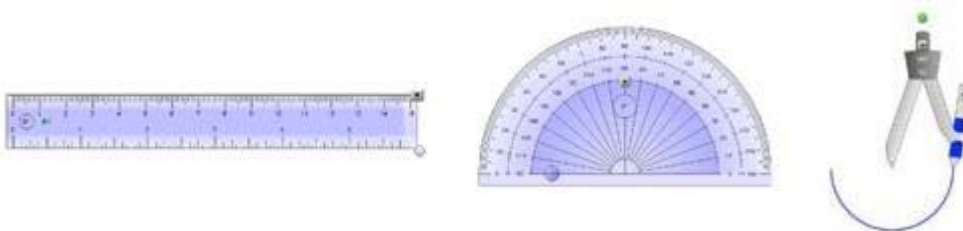

Dynamic Graphing

Create Graphs from equations, which are automatically updated when changes are made to the equation. Create graphs from a table of values, alter either and changes are reflected. Use the Custom Graph Builder to create Cartesian or quadrant graphs or a number line.

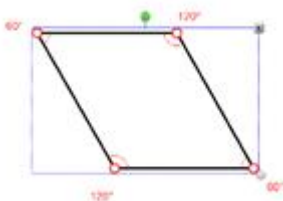

Exceptional Measurement Tools

Use a Ruler, Protractor or Compass to measure, creating perfect lines of measurement.

Advanced Shape Creation and Manipulation Tools

Insert and customize 3 to 15 side Regular Polygons, create and manipulate irregular polygons, divide circles into fractions, and manipulate shapes which display vertices, interior angles and side lengths.

Please contact CCS to ask about pricing for Math Tools, or visit the Training page on our website to sign up for our **NEW** Math Tools training course (a single-user license key is included with the training!).
